

ALUME CHANNELS™

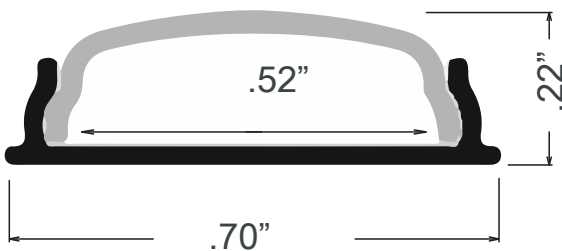

ALUME 120

Alume Channel Alume-120 can be bent into a variety of shapes to fit the unique contours of the surface they are being installed on. Some common shapes that our channel can be bent into include straight lines, curves, angles, and even circular shapes. It's important to note that when bending a flexible channel, care should be taken to avoid crimping or damaging the channel or the LED tape lights inside.
